SEO & Analytics: SEO, Google Analytics, Google Search Console, SEMrush, Website Performance Reporting

PROFESSIONAL EXPERIENCE

Web Administrator | Vaal University of Technology
July 2024 – Present

- Administer and maintain institutional and faculty websites using WordPress, managing content publishing, page creation, navigation, website updates and technical improvements.
- Led faculty website redesign initiatives in 2024 and 2026, improving information architecture, page layouts, responsiveness, usability and content maintainability.
- Design and implement branded landing pages, including VUT FM 96.9, balancing distinct page identities with institutional branding standards.
- Designed, developed and implemented an institutional AI chatbot, evolving from basic text-based responses to an OpenAI-powered solution, including ongoing testing and improvements.
- Create and optimise website graphics, branding assets and digital content using Adobe Illustrator, Photoshop and After Effects.
- Perform website quality assurance, usability testing, troubleshooting, SEO optimisation and analytics reporting using Google Analytics, SEMrush and Google Search Console.
- Collaborate with academic, communications and technical stakeholders to translate requirements into effective digital solutions, contributing to the team's Webometrics improvement from 22nd to 20th.

SELECTED PROJECTS

Dynamic Workflow & Process Management Platform
C# | .NET 8 | SQL Server | Entity Framework Core

- Developed a database-driven workflow platform supporting dynamic approval processes, role-based permissions and task management.
- Implemented conditional routing, audit logging and SLA monitoring to improve workflow visibility and accountability.

GitHub: https://github.com/Tshepisomofokeng/Dynamic-Workflow-Process-Management-Platform

Caeluvent – Full-Stack Event Management Platform
PHP | MySQL | JavaScript | Tailwind CSS

- Developed an event management platform for event creation, RSVP registration and attendee management.
- Implemented QR-code check-ins, payment workflows, email notifications and secure database-driven functionality.

Live project: https://app.caeluvent.co.za

Tapnext Finance – API & WordPress Plugin Development
PHP | WordPress | JavaScript | REST APIs

- Developed custom WordPress plugins and integrated external services through REST APIs.
- Worked on payment-related functionality and created supporting digital graphics and animations.

Website: https://tapnextfinance.com

VUT Digital Platforms – Website Redesign & AI Integration
WordPress | HTML | CSS | JavaScript | OpenAI | JSON

- Contributed to faculty website redesigns, improving content organisation, navigation, responsiveness and usability.
- Designed and developed the VUT FM 96.9 landing page, maintaining institutional brand consistency.
- Developed and integrated an institutional chatbot, including its interface, structured information and OpenAI-powered functionality.
