PROJECT EXPERIENCE

Dynamic Workflow & Process Management Platform

Technologies: .NET 8 | C# | SQL Server | Entity Framework Core | Bootstrap | HTML | CSS | JavaScript

- Designed and developed a database-driven workflow and process management application using C# and .NET 8.
- Implemented backend functionality for user authentication, role-based access control, task management and dynamically configurable workflows.
- Developed a workflow engine supporting conditional routing, approval processes and task assignment.
- Used Entity Framework Core to manage database operations and relationships between application entities in SQL Server.
- Implemented audit logging, SLA monitoring, overdue task detection and analytics functionality.
- Developed responsive application interfaces using Bootstrap, HTML, CSS and JavaScript.
- Structured the application to support configurable processes rather than relying on fixed, predefined workflows.

Caeluvent — Full-Stack Event Management Platform

Technologies: PHP 8.3 | MySQL | JavaScript | jQuery | Tailwind CSS | HTML | CSS | JSON | AJAX

- Conceptualised, designed and developed a full-stack event management platform for managing events, registrations and attendee check-ins.
- Planned the user interface and developed responsive layouts using HTML, Tailwind CSS and JavaScript, with a focus on a clean and consistent user experience.
- Developed server-side functionality using PHP 8.3 and PDO, connecting application features to a MySQL database.
- Implemented event creation, RSVP management, attendee tracking, capacity management and session-based attendance.

- Integrated QR-code functionality to support attendee check-in and event attendance verification.
- Used AJAX and JSON to support asynchronous communication between the frontend and backend.
- Developed payment workflows, automated email notifications, virtual event links, reporting and CSV exports.
- Implemented security measures including CSRF protection, rate limiting, password hashing and secure session management.
- Tested application workflows and functionality to ensure a consistent experience across desktop and mobile devices.

Tapnext Finance — API & WordPress Plugin Development

Technologies: PHP | WordPress | JavaScript | REST APIs | Adobe After Effects | Adobe Illustrator | Adobe Photoshop

- Developed custom WordPress plugins and backend functionality to extend the capabilities of the Tapnext Finance platform.
- Developed and integrated REST API functionality to enable communication between WordPress and external services.
- Implemented functionality supporting Tapnext Finance as a payment option on integrated platforms.
- Worked with PHP backend logic, JavaScript, API requests and responses, third-party service integration and functionality testing.
- Created digital design assets using Adobe Illustrator to support the platform's visual identity and online presence.
- Produced animated visual content and motion graphics using Adobe After Effects for website and digital marketing purposes.
- Used Adobe Photoshop for image editing and preparation of digital content.

Valtero — Vehicle Booking Website

Technologies: WordPress | Astra | Elementor | HTML | CSS | JavaScript | Adobe Illustrator | Adobe Photoshop

- Conceptualised and designed a premium vehicle booking and enquiry website, focusing on a minimal, refined and user-friendly visual experience.
- Planned the website structure and wireframed page layouts to establish content hierarchy, navigation and the placement of key booking information.
- Used Adobe Illustrator to develop and prepare visual design elements that supported the website's branding and overall aesthetic.
- Used Adobe Photoshop to edit and prepare vehicle imagery, maintaining visual consistency in image presentation across the website.
- Built and customised the website using WordPress, Astra and Elementor.
- Applied HTML, CSS and JavaScript to customise frontend layouts, styling and interactive elements beyond standard page-builder configurations.
- Designed responsive layouts to maintain a consistent experience across desktop, tablet and mobile devices.
- Structured the website around vehicle enquiries and booking interactions, incorporating contact forms and WhatsApp as enquiry channels.

Buti Malinga Foundation — Non-Profit Organisation Website

Technologies: WordPress | Astra | Elementor | HTML | CSS | JavaScript | Adobe Illustrator | Adobe Photoshop

- Designed and developed a responsive website to communicate the foundation's programmes, initiatives and community impact.
- Planned the website's page structure and content organisation to make important information accessible to visitors.
- Built the website using WordPress, Astra and Elementor, customising layouts and page sections to suit the foundation's identity.
- Used HTML and CSS to refine frontend presentation, while JavaScript supported interactive website elements.
- Applied responsive design principles to ensure the website remained accessible across different screen sizes.
- Used Adobe Illustrator and Photoshop to prepare and refine visual assets and imagery for the website.
- Applied SEO and content optimisation practices to improve the organisation's online visibility and search accessibility.

Sleak & Co — WooCommerce E-Commerce Platform

Technologies: WordPress | WooCommerce | PHP | JavaScript | HTML | CSS

- Developed and configured an e-commerce website using WordPress and WooCommerce.
- Configured the online store structure, product presentation and customer purchasing journey.
- Customised frontend elements using HTML, CSS and JavaScript to support the website's layout and user experience.
- Worked with PHP and WooCommerce functionality to support the store's backend operations.
- Integrated Tapnext Finance as a payment option, supporting the payment process within the checkout experience.
- Tested key shopping and checkout interactions to ensure the purchasing process functioned as expected.

APC Paralegal — Website Development

Technologies: HTML | CSS | JavaScript

- Designed and developed a responsive website to establish a professional online presence for the organisation.
- Structured website content and page layouts to make information clear and accessible to visitors.
- Developed the frontend using HTML, CSS and JavaScript.
- Implemented responsive styling and interactive interface elements to support different screen sizes.
- Incorporated custom frontend animations and visual interactions to improve the overall browsing experience.

VUT Faculty Website Redesign — 2024 & 2026

Technologies: WordPress | HTML | CSS | JavaScript | UX/UI Design | Adobe Illustrator | Adobe Photoshop

- Participated in the redesign and ongoing management of institutional and faculty websites following the 2024 migration to a lighter website environment.
- Developed a second-generation redesign in 2026 to accommodate growing content requirements and improve website maintainability.
- Planned and restructured page layouts, information architecture and navigation to improve content discovery and the overall user experience.
- Used WordPress and its page-building environment to implement website layouts and manage institutional content.
- Applied HTML, CSS and JavaScript to customise frontend presentation, layouts and interactive elements.
- Used Adobe Illustrator to create and prepare website design assets and visual elements in line with institutional branding.
- Used Adobe Photoshop to edit, optimise and prepare images for website publication.
- Applied responsive design, usability and accessibility principles across different devices.
- Worked with content stakeholders to publish and organise information while maintaining institutional website standards.
- Contributed to the team's Webometrics improvement from 22nd to 20th through website improvements, content restructuring and the incorporation of more research-focused content.

VUT AI Chatbot — Design, Development & Integration

Technologies: WordPress | WPBot | OpenAI | PHP | JavaScript | JSON

- Designed and developed the chatbot interface and user experience for the VUT institutional website.
- Initially implemented a text-based chatbot solution using WPBot in 2025 to provide users with automated responses to common institutional enquiries.
- Migrated and integrated the chatbot with OpenAI in 2026 to improve response quality and support more natural language interactions.
- Used JSON to structure institutional information and provide organised information for chatbot responses.
- Worked with WordPress and the chatbot integration to make institutional information accessible through a conversational interface.
- Conduct ongoing testing, maintenance and improvements to enhance response accuracy and the user experience.

VUT FM 96.9 — Branded Landing Page Development

Technologies: WordPress | HTML | CSS | JavaScript | UX/UI Design | Adobe Illustrator | Adobe Photoshop

- Designed and developed a dedicated landing page for VUT FM 96.9 within the VUT institutional website.
- Created a distinctive landing page experience that reflects the radio station's identity while remaining consistent with the university's overall branding and visual standards.
- Structured the page layout, content sections and navigation to present the radio station's information in an engaging and accessible format.
- Used WordPress to implement the page and HTML, CSS and JavaScript to customise its frontend presentation and interactive elements.
- Applied visual design and UX principles to balance the station's unique identity with the established institutional website design.
- Ensured the landing page maintained a responsive and consistent experience across different devices.
